

# Meu workflow

\* bundle install

# Add pull request trigger

The screenshot displays the Bitrise web interface. At the top, a navigation bar includes links for Workflows, Code Signing, Secrets, Env Vars, Triggers (which is the active tab), Stack, and a link to bitrise.yml. Below the navigation bar, there are three tabs: PUSH, PULL REQUEST (which is selected and highlighted in blue), and TAG. Under the PULL REQUEST tab, there is a button labeled '+ ADD TRIGGER'. Below this, a trigger configuration is shown. It consists of a box on the left containing a pull request icon, a 'SOURCE BRANCH' field with an asterisk (\*), and a 'TARGET BRANCH' field with the value 'master'. An arrow points from this box to a light blue box on the right labeled 'Workflow primary'. To the right of the workflow box is a trash icon. At the bottom, there is another button labeled '+ ADD TRIGGER'.
